Exo Terra Solar Glo UV/ Heat (100 W Flood) Bulb

An Exo Terra Solar Glo UV/ Heat (100 W Flood) Bulb is recommended during the day for reptiles. Unlike the fluorescent tubes, this bulb provides UV at the similar overall output level as the sun. It is also a source of both UV and heat, and will last for a full year. The bulb needs to be in a clamp lamp with a ceramic fixture to prevent melting. The fixture should be carefully secured to avoid being bumped and breaking the filament or starting a fire. A red heat bulb can be used at night to prevent nighttime temperature drops. UV is crucial for vitamin D, which allows the proper absorption of calcium.
